**PROJECT:** IOT Based Smart waste management for metropolitan cities

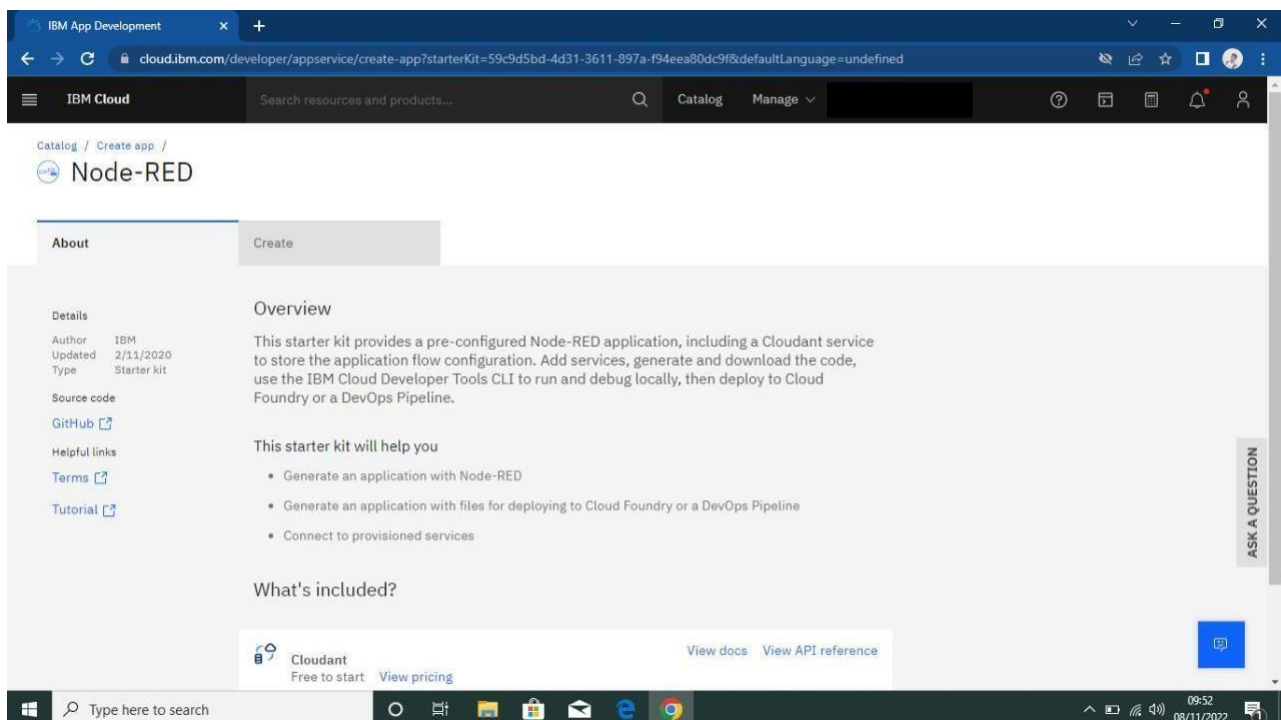

## Create Node-RED Service

### Aim:

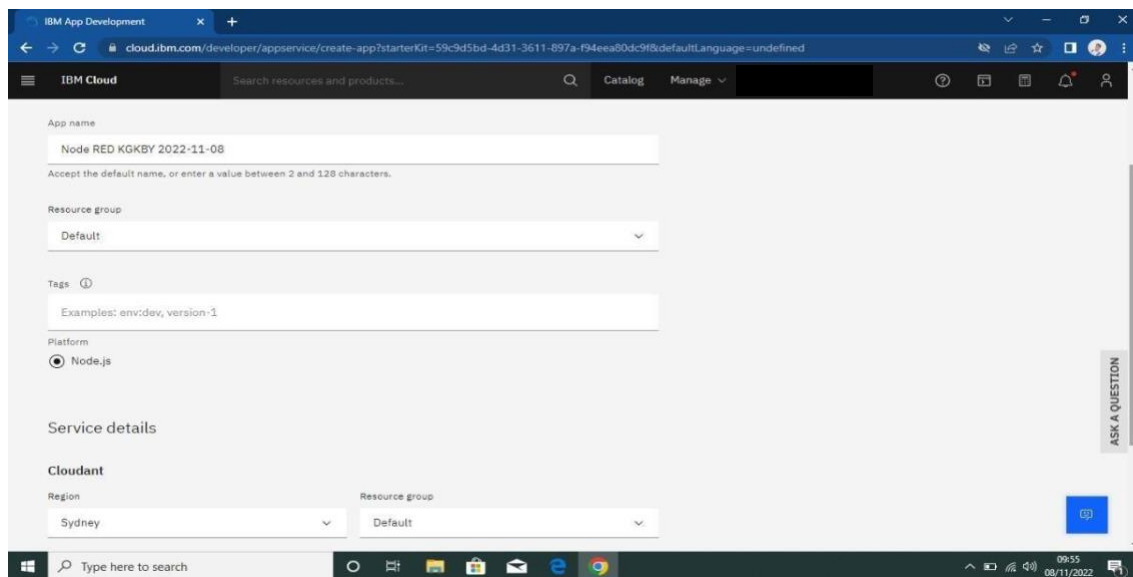

To create a web application, create a Node-RED service.

### Steps:

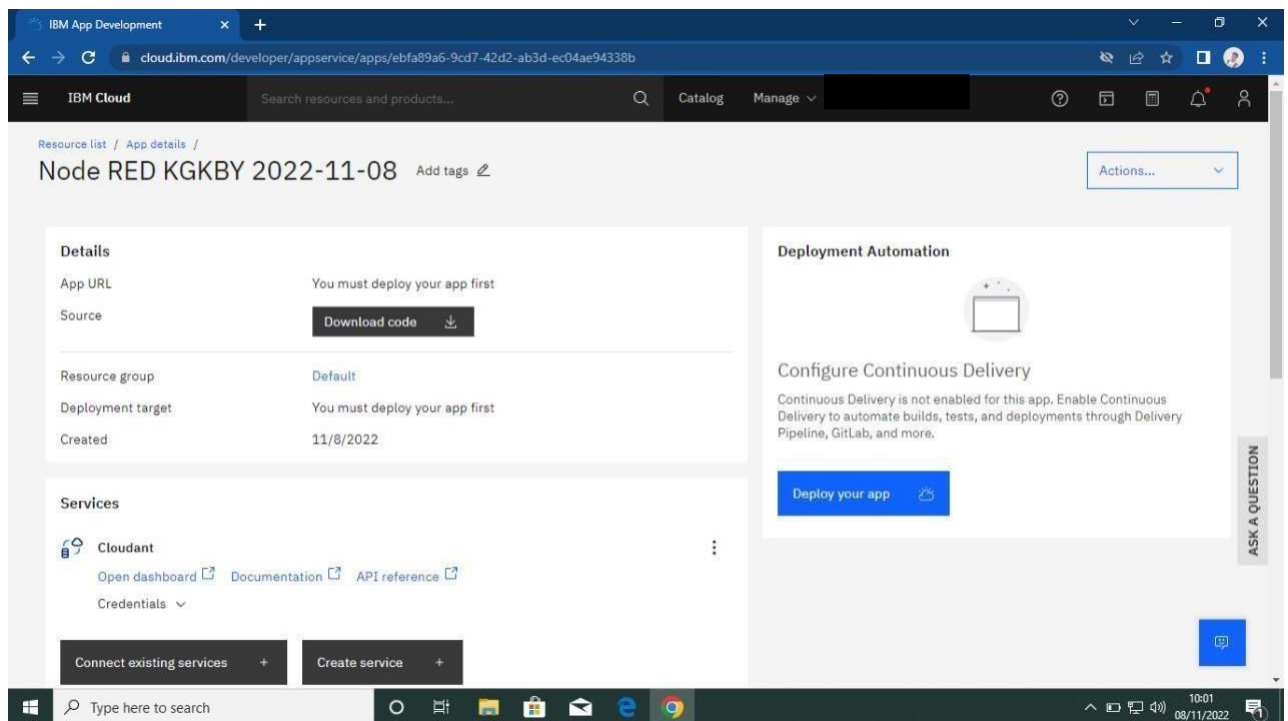

1. Navigated to the App creation page

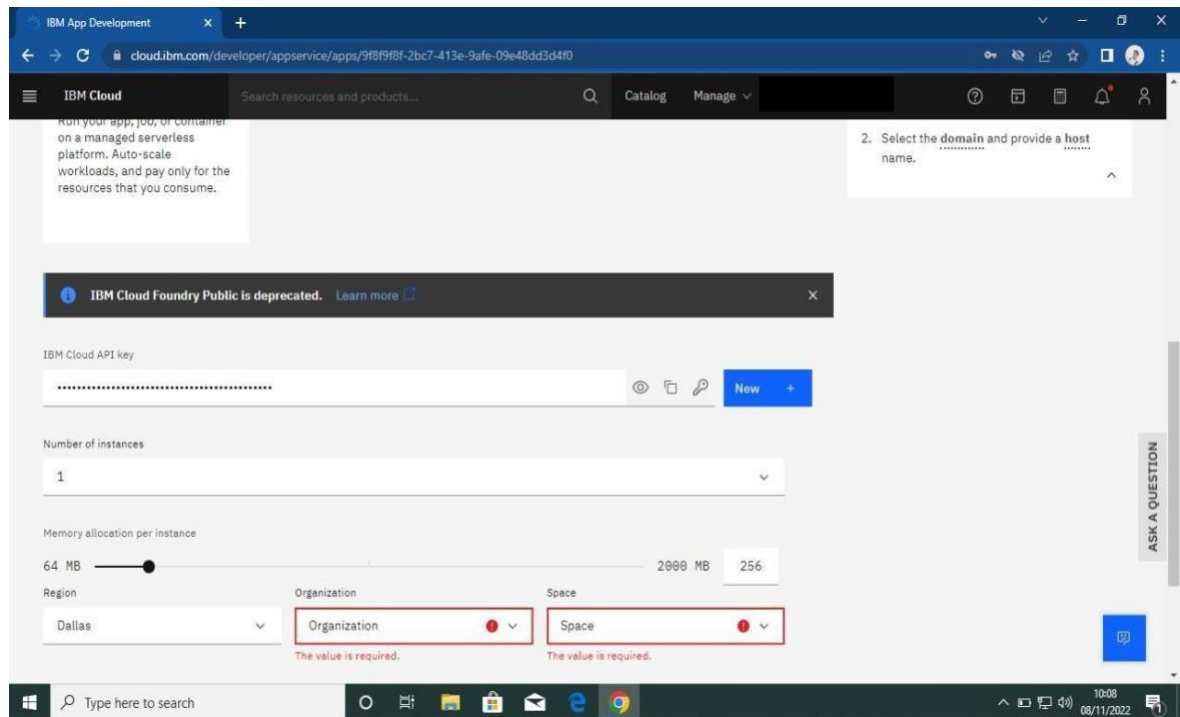

2. Entered project details and clicked on create

3. Clicking on the “Deploy your App” Button

#### 4. Setting up the environment and deploying the app

#### 5. Successfully deployed the app

### Delivery Pipelines

Name	ci-pipeline <a href="#">↗</a>
Status	✓ Success <a href="#">↗</a>
Last input	Last commit by IBM Cloud DevOps Services (7 minutes ago) Clone from zip <a href="#">↗</a>

#### 6. Welcomed by the instance editor

## Welcome to your new Node-RED instance on IBM Cloud

We know you're eager to start wiring up your flows, but first there are a couple of tasks you should do:

- Secure your Node-RED editor
- Learn how to install additional nodes

### 7. Setting up credentials

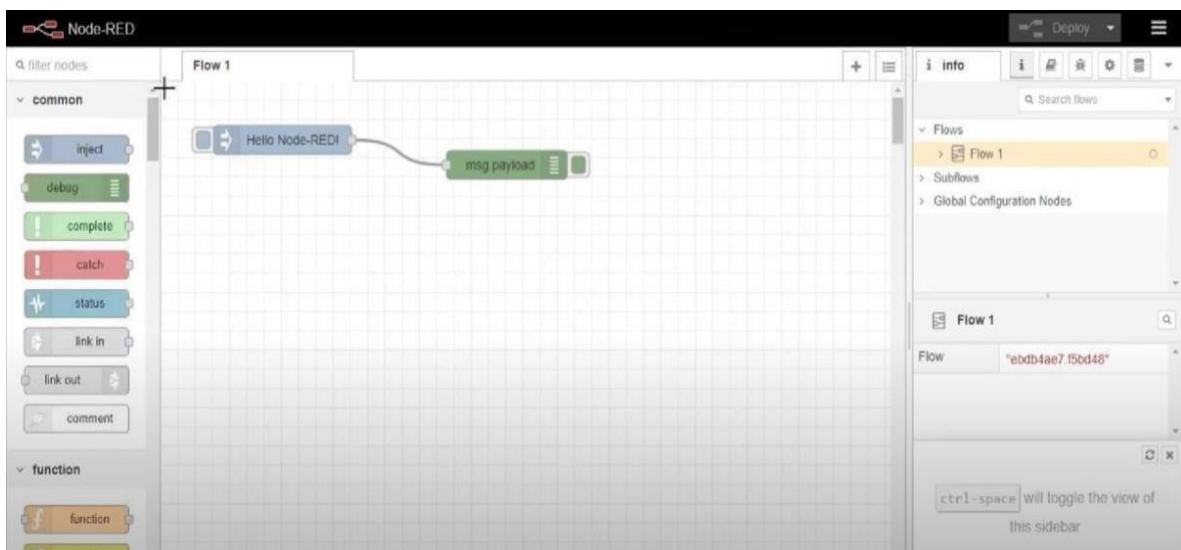

☐ Secure your editor so only authorised users can access it

☒ *Not recommended:* Allow anyone to access the editor and make changes

Your editor will not be secured. Anyone with the URL will be able to access your flows, data and bound services.

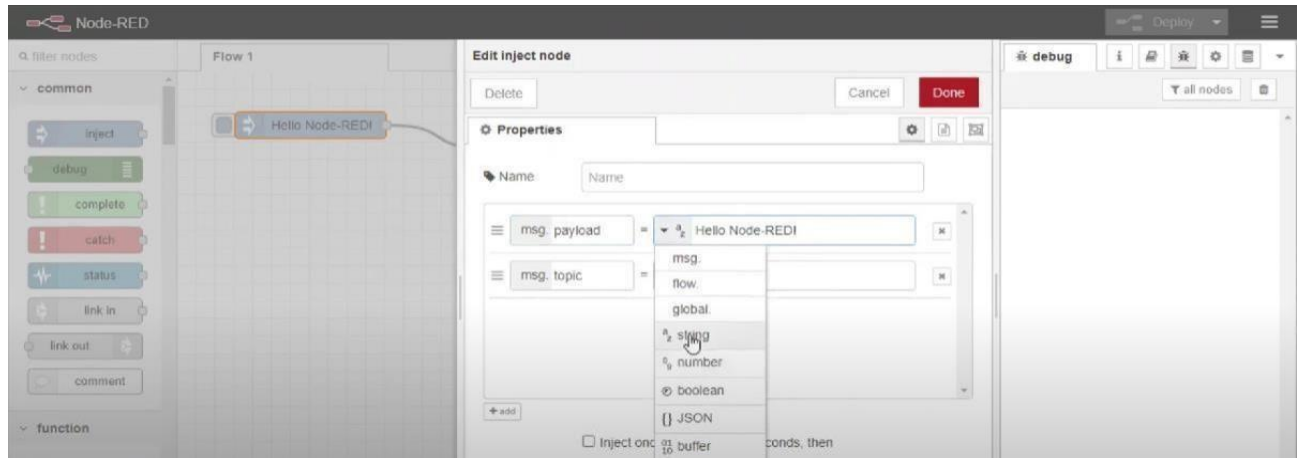

☒ Tick this box to confirm you want your editor to be insecure

### 8. Dragged and dropped components into the editor

•

## 9.Editing some values of the properties

## 10.Successfully deployed the app

### Result:

Successfully created a NodeRED service on IBM Cloud
